Group Research Projects

Active learning in heterogeneous information networks
- Joint work with Doris and De
- Submitted to KDD

Tensor2Vec
- Joint work with Huan, Jialu, Fangbo, and Meng Jiang
- Submitted to KDD
Personal Research Projects

Personalized Recommendation using HIN embedding

- Goal - give recommendations which are personalized and interpretable by exploiting node embeddings derived from a HIN
- Approach similar to Tensor2Vec with some recommendation specific extensions

Want to collaborate?

Me too! Let me know if you’re interested in using an interesting new dataset (US congressional data) or working on an interesting embedding problem.
