This class teaches the fundamentals of Software Engineering by showing how to work with an existing large software project rather than how to build software from the ground up. To illustrate those concepts, we will be most likely contributing to iTrust, an open-source role-based healthcare web application. We will use Eclipse, a popular IDE, as a tool for working with code.
## Current Announcements

We will use Piazza, not Wiki blog posts, for course communication. See [Communicating with the Staff](#).

Students need to work in pairs for MP1. You can choose your partner until Thursday, Sept 4th. See [CS427 Student Pairs](#).
