Introduction

- Who we are
- What cPanel is
- What we'll be doing in class
- Particular questions people would like to see discussed?

Signalling with sticky notes

Based on Software Carpentry's method of guidance, we'll be using sticky notes to signal each other by putting them on the edge of your computer screen in a place that's visible to helpers.

- One color for "yes" / "I've got it"
- Another color for "no" / "I need help"

Setup

- Log in to your lab computer using the provided guest ID and password.
  - (Optional) Public SSH Key: You can either use your own or we'll create one for you in class.
- Useful windows to have open
  - http://go.illinois.edu/cpaneltraining (this document)
  - https://web.illinois.edu
  - (Optional) Shell window that supports SSH/SFTP
    - All the EWS computers offer this.
    - If you've brought your own Windows laptop, you'll want something like PuTTY and WinSCP.
