Surveys & New Articles

With the semester winding down, I think it's time to look back on what we've accomplished. Our surveys will be going out to ALL ECE classes within the next few days. **PLEASE take the time to fill them out.** We intend to publish anonymized survey responses from these surveys and from the surveys from last semester in the near future.

We've also had several new articles written this semester, with many more on the way in the next few weeks. Some of the latest articles are:

- PHYS 211 - University Physics: Mechanics
- PHYS 486 - Quantum Physics I
- ASTR 210 - Introduction to Astrophysics
- MATH 415 - Applied Linear Algebra
- MATH 424 - Honors Real Analysis
- ECE 414 - Biomedical Instrumentation
- ECE 416 (BIOE 416) - Biosensors
- Updated CS 225 - Data Structures

However, we still have a long way to go - a quick look at the ECE & CS Technical Electives page makes this very clear. If you have taken ANY class on that page which does not yet have an article, please log in and start writing!

I hope you all have a good rest of the semester, and good luck with finals.

-David
