About Us

About the Morril Engineering Program

Formalized in 1973, The Morril Engineering Program (MEP) was developed to attract and retain aspiring engineers from underrepresented groups in engineering including African Americans, Native Americans, and Latinos/as. Through MEP, students find academic support services and activities, scholarship assistance, work experience, and community.

The MEP approach includes:

**ACADEMICS**: The MEP is one of the most recognizable academic support programs on campus because of our commitment to academic engagement through scholarships, research internships, preparatory courses, and support for academic excellence.

**PROFESSIONAL PREPARATION**: The MEP offers a variety of opportunities for professional preparation, such as research internships, mentoring with alumni, and pairing students with respected researchers and employers.

**OUTREACH**: Public engagement and outreach activities cultivate an interest in science and engineering among elementary, middle, and high school students via field trips and school visits.

**CORPORATE PARTNERS**: The MEP is very grateful to be recognized as a high quality program by many corporate sponsors. Through such assistance, the MEP is able to provide financial support in the form of scholarships, incentive awards, and relevant work experiences.

**SIGNATURE ACTIVITIES**: Each year, the MEP distinguishes itself with several signature activities. These events reach out to future students, help retain current students, and keep alumni involved with the MEP.

Check out MEP's newsletter for more information on the program's current activities.
